

wrist size guide

printing instructions

Make sure you do not scale the contents when printing. The scale should be set to 100%, or “Actual Size”, or similar, depending on your printer software. To make sure it has printed correctly, use a physical ruler to double check the distances of the printed marks.

measuring your wrist size

Cut out the measuring guide. Place the guide around your wrist just below the wrist bone, making sure that it is not super tight (an index finger should fit through).

When wrapping the guide, the pointy end with the FORTIS crown should go **underneath** the flat end. This way, the “↓ cm” and “↑ in” markings would show you how big your bracelet should be in centimeters or inches, respectively.

If your measurement shows something in-between, round the number to the closest one we offer on our website.
